DETAILED ACTION

Allowable Subject Matter

1. Claims 1, 2, 4-10, 12, 31, 33-37, and 39 are allowed.
2. The following is an examiner's statement of reasons for allowance: Claims 16-27 are allowable for the reasons indicated in the office action mailed March 16, 2009.

Regarding **claim 1, Halpern 4,613,990** discloses a wireless communication network comprising: a set of n nodes, where at least one of the n nodes comprises: an antenna element for transmitting and receiving a wireless signal; a detector element configured to determine a minimum transmittance power required to convey data to a cluster of nodes.

The instant invention discloses the cluster comprising N nodes of the set of n nodes, wherein $2 \leq N < n - 1$; and a transmit power adjustment element, operatively interfaced with the detector element, the transmit power adjustment element configured to provide the minimum transmittance power to the antenna element; wherein at least one of the nodes is a power-adjustable node, the power-adjustable node further comprises a connectivity table for storing an identifier and the minimum transmittance power associated with the power adjustable node within the cluster. The above novel features in combination with other limitations of the claim are neither taught, suggested, nor made obvious by Halpern or any other prior art of record. Claims 2 and 4-9 are allowable by virtue of their dependency on claim 1.

Regarding **claim 10, Halpern 4,613,990** discloses a wireless communication device for use in a wireless communication network; a detector element configured to

determine a minimum transmittance power required to convey data to a cluster of nodes.

The instant invention discloses the cluster comprising N nodes of a set of n nodes, wherein $2 \leq N < n - 1$; and a transmit power adjustment element, operatively interfaced with the detector element, the transmit power adjustment element configured to provide the minimum transmittance power to the antenna element; and further comprising a connectivity table for storing an identifier and the minimum transmittance power associated with at least one of the nodes within the cluster. The above novel features in combination with other limitations of the claim are neither taught, suggested, nor made obvious by Halpern or any other prior art of record. Claims 12-15 are allowable by virtue of their dependency on claim 10.

Regarding **claim 28, Halpern 4,613,990** discloses a method for improving multi-hop network data throughput in wireless ad hoc networks by optimizing transmitter output power, the wireless ad hoc network having n nodes, the method comprising acts of: receiving a plurality of signals from different wireless nodes in the wireless ad hoc network wherein at least one received signal has a known transmittance power.

The instant invention discloses calculating a degree of signal attenuation for at least one node in the cluster; and utilizing the determined degree of signal attenuation and the known transmittance powers to calculate a near optimal transmittance power, whereby a cluster of N neighbors is determined, wherein $2 \leq N < n - 1$; and wherein the method is applied to a network of sensor nodes. The above novel features in combination with other limitations of the claim are neither taught, suggested, nor made

obvious by Halpern or any other prior art of record. Claims 29-31 and 33 are allowable by virtue of their dependency on claim 28.

Regarding **claim 34, Halpern 4,613,990** discloses a method of optimizing power consumption in a network, the network having a first node and a second node, the method comprising steps of: receiving a beacon signal from the first node at a known transmit power; measuring a received power level of the beacon signal at the second node.

The instant invention discloses calculating a optimum transmit power from the second node to the first node based upon the known transmit power and the received power level of the beacon; and utilizing the optimum transmit power when sending data from the second node to the first node; and wherein the method is applied to a network of sensor nodes. The above novel features in combination with other limitations of the claim are neither taught, suggested, nor made obvious by Halpern or any other prior art of record. Claims 35-37 and 39 are allowable by virtue of their dependency on claim 34.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
